Information Disclosure Statement

1. Applicant has provided a document titled as an Information Disclosure Statement, but which cites no documents. Inasmuch as there are no documents cited therein for the examiner to consider, no initialed copy of this document is being returned to applicant.

Claim Rejections - 35 USC § 112

2. Claims 1-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 1, line 9 of the claim, it is not clear what element the fulcrum mechanism is intended to cooperate with; in claim 10, line 3, the terms "said sloping shovel end" and "said rear end" lack a clear antecedent basis in the claims, and from the recitation it appears as though they should be "said front-loading end" and "said rear receptacle end" respectively; in claims 12-16, the use of 'type' in the preamble renders the scope unclear in that it is not clear which particular characteristics associated with a self-loading wheel barrow are or are not being precisely incorporated into the claims. In this case, applicant may desire to simply remove "type" from the preamble; in claim 16, the reference to the springs is not provided with adequate antecedent basis, as the spring elements are recited in claim13, but not in claim 12, from which claim 16 is currently written to depend.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Mills (GB 2,289,024). Mills teaches a wheelbarrow comprising a wheeled body having a front loading end (21) and a rear receptacle end (19), a pair of laterally spaced handles (18)

Art Unit: 3618

fixed to the body at laterally opposite sides thereof, and a fulcrum mechanism (10, 11, note abstract) connected to the wheelbarrow in a pivotal manner and movable from a retracted position which clears the ground, to an extended position which engages the ground and performs as a fulcrum, the fulcrum cooperating to 'assist in levering up a load of material'.

5. Claims 1, 9, and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Douglas (US 4,261,596). Douglas teaches a wheelbarrow comprising a wheeled body with opposing lateral sides (23) and having a front loading end (26) and a rear receptacle end (21), a pair of laterally spaced handles (46, 46, connected to one another at 45) fixed to the body at laterally opposite sides thereof, and a fulcrum mechanism (49) connected to the wheelbarrow in a pivotal manner (at 48) and movable from a retracted position (figure 7E) which clears the ground, to an extended position which engages the ground (figure 1, 2) and performs as a fulcrum, the fulcrum cooperating to 'assist in levering up a load of material' if a force is exerted in a given direction on the handles (e.g., downwardly), and a pair of wheels (W, 44) mounted on an axle (C) on each side of the body, being located between the front loading end and the rear receptacle end of the body.

Allowable Subject Matter

- 6. Claim 12, as understood, would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
- 7. Claims 2-8, 11, and 13-16, as understood, would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Littlefield (US 1,617,644), Knudtson (US 2,261,520), Thomas (US 2,632,966), Bachman (US 2,589,325), Romang (US 2,817,538), Steer (US

4,921,305), Tanner et al. (US 6,050,576), Fukuda (JP 10-1056), and Carosi et al. (WO 2005/014366) teach wheel barrow devices of pertinence.

9. Any inquiry specifically concerning this communication or earlier communications from the examiner should be directed to F. Vanaman whose telephone number is 571-272-6701.

Any inquiries of a general nature or relating to the status of this application may be made through either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

A response to this action should be mailed to:

Mail Stop ____ Commissioner for Patents P. O. Box 1450 Alexandria, VA 22313-1450,

Or faxed to:
